Chipline Technologies shortlisted for Startup Awards National Series

London-based Chipline Technologies has been named one of the most exciting new businesses in the region after being shortlisted as part of a brand-new awards program.

The StartUp Awards National Series has been launched to recognize the booming startup scene across the UK which has accelerated since the pandemic began. In 2020, when most of the world was shutting down, more than 400,000 startups were set up in Britain, with similar increases seen in other European countries.

There was stiff competition with over 2,500 applications received in response to the Startup Awards National Series' first-ever call for entries.

Stanley Ponraj, Chief Executive Officer of Chipline Technologies said: "Everything will be possible if our innovation is apart from our technology, our goals determine our destiny".

Supported nationally by BT, EY, Dell & Intel, the program will celebrate the achievements of the amazing individuals across the UK who have turned an idea into an opportunity and taken the risk to launch a new product or service.

Co-founded by the team behind the Great British Entrepreneur Awards, the new series follows the success of the Wales Startup Awards, after organizers recognized the exceptional potential in the startup scene across the other British regions.

Professor Dylan Jones-Evans OBE, the creator of the Startup Awards National Series, said: " New firms are important for generating economic prosperity, employment opportunities and innovation. Since 2016, the Wales Startup Awards have celebrated this amazing annual contribution to our economy by entrepreneurs and the impact they have on communities across the nation.

"Given the sheer volume of phenomenal startups we've heard from since then, as well as the huge post-pandemic shift in people's desires to take their career in a new direction and set up a business against the odds, we felt it was the right time to take the programme nationwide. We've been blown away by the standard of entries in this first year and truly look forward to crowning the winners in September."

EDITOR NOTES

Chipline Technologies

We are looking back at the times behind our past there will be drastic change in the field of technology. We assure focussing on technology that enables technology that are designed for the future.

If you take communication channels, we started with wired telephones and now we have developed until smart watches but when I was studying my bachelor's in Mechatronics Engineering, I wondered how the automotive systems are still depending on fuel stations. Now EV's are developed but still it works on the same phenomenon. We need to rely on charging stations then.

To eliminate that, we and our team of skilled staffs made a fuel cell which will power up the vehicle for 4-6 months and as a result it becomes independent then. It saves people time, energy, and money. Vehicles are one of the primary thing we are using every day, each time for transportation. We are making that channel independent.

Startup Awards National Series

The Startup Awards National Series is a collaboration between the founders of the Great British Entrepreneur Awards - an established program nationally receiving over 5,000 applications annually - and the Wales Start-Up Awards, the only regional awards currently celebrating new businesses in the UK.

The Startup Awards National Series will recognize the achievements of those amazing individuals who have had a great idea, spotted the opportunity and taken the risks to launch a new product or service.

Already established and thriving in Wales, the Startup Awards National Series is now taking the passion and drive to celebrate new business and extending across the whole of the United Kingdom.
